

## AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

### **LISTING OF CLAIMS**

1. (Currently Amended) A liquid crystal device comprising:  
  
first and second substrates;  
  
a liquid crystal layer disposed between said first and second substrates;  
  
a plurality of transparent electrodes which are formed above a surface of said second substrate on the side of said liquid crystal layer, said plurality of transparent electrodes being spaced from each other in a horizontal direction when seen in a direction perpendicular to said second substrate; and  
  
a plurality of reflective films formed between said plurality of transparent electrodes and said second substrate, in areas opposing respective ones of said plurality of transparent electrodes, said plurality of transparent electrodes being formed directly on said reflective films,  
  
~~wherein said reflective films are not formed in an area opposing at least some part of a space between the plurality of transparent electrodes~~wherein said transparent electrodes are also formed in at least some part of a space between the plurality of reflective films.
  
2. (Previously Presented) The liquid crystal device according to Claim 1, wherein said reflective films are arranged in correspondence with respective ones of said plurality of transparent electrodes.

3. (Previously Presented) The liquid crystal device according to Claim 1, further comprising a color filter formed on at least one of said first and second substrates, said color filter including colored areas opposing respective ones of said transparent electrodes,

wherein said color filter includes no light shielding area in an area opposing at least some part of a space between said transparent electrodes.

4-10. (Cancelled).

11-13. (Cancelled).

14. (Currently Amended) A liquid crystal device comprising:

a first substrate;

a second substrate disposed opposite to said first substrate;

a liquid crystal layer disposed between said first and second substrates;

a plurality of reflectors formed on said second substrate on the side of said liquid crystal layer, said reflectors being spaced apart from each other; and

a plurality of transparent electrodes formed on respective ones of said reflectors[.],

wherein said transparent electrodes are also formed in at least some part of a space between the plurality of reflectors.

15. (Previously Presented) The liquid crystal device of Claim 14 further comprising a color filter on respective ones of said plurality of transparent electrodes.

16. (Previously Presented) The liquid crystal devices of Claim 15, wherein said color filter are not disposed between said transparent electrodes.

17. (Cancelled).

18. (Previously Presented) The liquid crystal devices of Claim 14 further comprising a plurality of switching elements, each of said switching elements being connected with respective ones of said transparent electrodes.

19. (Currently Amended) A liquid crystal device comprising:

a first substrate;

a second substrate disposed opposite to said first substrate;

a liquid crystal layer disposed between said first and second substrates;

a plurality of transfectors formed on said second substrate on the side of said liquid crystal layer, said transfectors being spaced from each other;

a plurality of transparent electrodes formed on respective ones of said transfectors; and

a backlight positioned on an opposite side of said second substrate with respect to said liquid crystal layer[.],

wherein said transparent electrodes are also formed in at least some part of a space between the plurality of reflectors.

20. (Previously Presented) The liquid crystal device of Claim 19 further comprising:

a polarizer disposed between said second substrate and said backlight;  
and

a retardation film disposed between said second substrate and said polarizer.

21. (Previously Presented) The liquid crystal device of Claim 19, further comprising a color filter disposed on respective ones of said transparent electrodes.

22. (Cancelled)

23. (Previously Presented) The liquid crystal device of Claim 19 further comprising a plurality of switching elements, each of said switching elements being connected with respective ones of said transparent electrodes.

24. (Previously Presented) The liquid crystal device of Claim 19, wherein said transfectors further comprise a reflective film having an opening.

25. (Currently Amended) An electronic device comprising:

a main body; and

a display unit including a liquid crystal device, said liquid crystal device including:

a first substrate;

a second substrate disposed opposite to said first substrate;

a liquid crystal layer disposed between said first and second substrates;

a plurality of reflectors formed on said second substrate on the side of said liquid crystal layer, said reflectors being spaced from each other; and

a plurality of transparent electrodes formed on said ~~transparent electrodes~~ plurality of reflectors [.]

wherein said transparent electrodes are also formed in at least some part of a space between the plurality of reflectors.

26. (Currently Amended) An electronic device, comprising:

a main body; and

display unit including a liquid crystal device, said liquid crystal device including:

a first substrate;

a second substrate disposed opposite to said first substrate;

a liquid crystal layer disposed between said first and second substrates;

a plurality of transfectors formed on said second substrates on the side of said liquid crystal layer, said transfectors being spaced from each other;

a plurality of transparent electrodes formed on said ~~transparent electrodes~~  
transfectors; and

a backlight positioned on an opposite side of said second substrate with respect to said liquid crystal layer[.].

wherein said transparent electrodes are also formed in an area opposing at least some part of a space between the plurality of transfectors.

27. (New) The liquid crystal device according to Claim 1, wherein said reflective films further comprise insular.

28. (New) The liquid crystal devices of Claim 15, wherein said color filters are also formed in an area opposing at least some part of a space between the plurality of reflectors.

29. (New) The liquid crystal device according to Claim 14, wherein said reflectors further comprise insular.

30. (New) The liquid crystal device according to Claim 19, wherein said transfectors further comprise insular.

31. (New) The liquid crystal devices of Claim 21, wherein said color filters are also formed in an area opposing at least some part of a space between the plurality of transfectors.
